

The Klein SMARTSPRAY® is an innovative, energy efficient, cost effective water pump drive system that enhances performance, is easy to operate, improves job site & operator safety, and is more functional than any other water truck water pump drive system available today.

- SMARTSPRAY® is a Hydraulic driven water pump drive system.
- Energy efficient- the SMARTSPRAY® only uses the power required to do the work, thus saves on fuel, component wear and tear, etc....
- Water discharge can be completely controlled for volume and pressure, independent of truck engine RPM or ground speed, giving operator much more control and functionality.
- Water pump operation can be adjusted from completely off, to maximum speeds simply by moving a joy stick or pressing a touch pad regardless of engine RPM.
- Option to select specific discharge pressure and system maintains same throughout discharge cycle regardless of truck engine speed or quantity of discharge valves working.
- It is SAFE to operate. Operator no longer has to manipulate brakes, accelerator or ground speed to achieve desired discharge. Simply move a joy stick or press a touch pad, independent of truck speed. Eyes on road, hands on steering wheel. Safe AND simple.
- Control the amount of water needed precisely. By having control over water discharge at all truck speeds, independently of truck speed, wasted water is reduced and smaller capacity trucks can now perform as well, or outperform much larger capacity vehicles.
- SMARTSPRAY® is strong, robust and reliable. The best premium components used in assembly. Facilities are built into the SMARTSPRAY® circuit that completely eliminate “spike”, giving the operator the freedom to use water pump at any time, fast or slow, at any engine RPM, or stop discharge suddenly in an emergency without damaging “spike” occurring.

The SMARTSPRAY® is proven effective. It is SAFE, it is EFFICIENT, it is FUNCTIONAL and it is economically feasible for every water truck .
